## HEAD

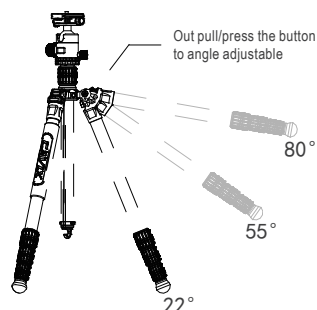

### Instruction of Fine-tuned:

☆The fine-tuned button to the end of anticlockwise.

- ①To keep the fine-tuned button to the end of anticlockwise at first.
- ②Adjust the pedestal lock and ball to the best
- ③Back rotating the knob with clockwise
- ④The ball was the best position after adjusted

Notice: If the ball was "locking-up", just rotating the button again with anticlockwise to ball moving, it will be ok to re-adjustable the pedestal

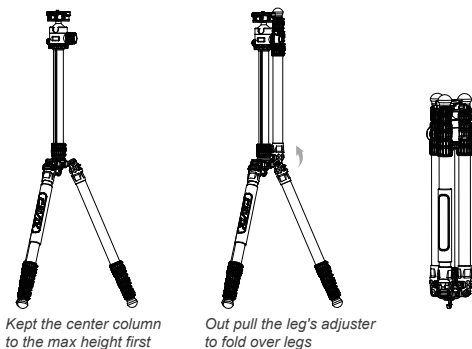

## LEG ANGLE

Tripod's angle adjust:

Out pull the adjuster to adjust the leg's angle, there are three stops of leg angle adjustable, e.g. 80 degree, 55 degree, 22 degree. And press the button to lock after angle was adjusted well.

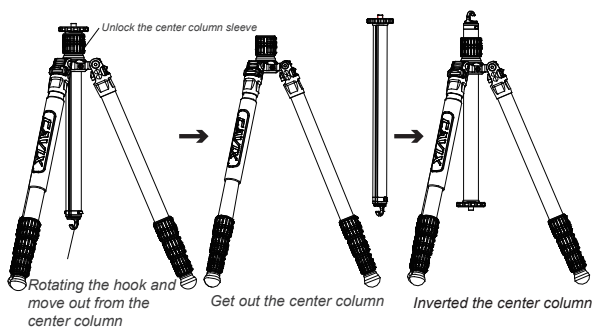

## TRIPOD FOLDED

Tripod folded:

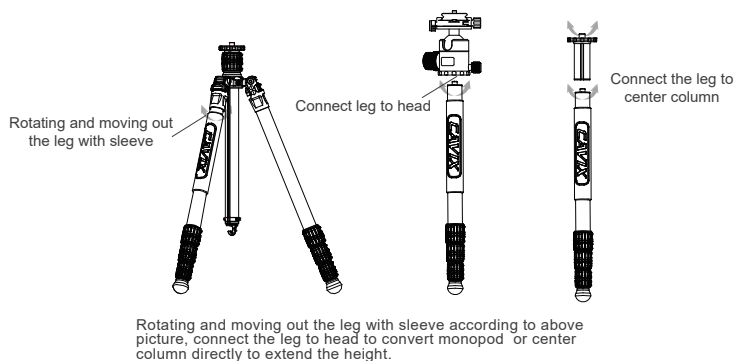

Recover all legs after worked, and keep the center column to the max height. Out pull all leg's adjuster to fold over legs to keep tripod in mini height and very good for carrying

## CENTER COLUMN INVERT

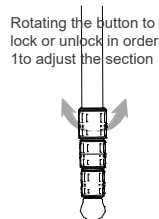

Unlock the center column sleeve, and rotating the hook and move out from the center column. Get out the center column and invert it, input the hook on top (see picture), and lock the center column sleeve.

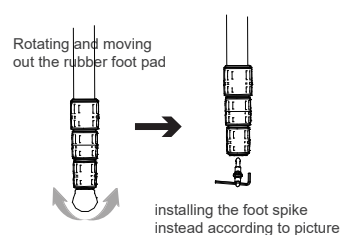

## TRIPOD CONVERT MONOPOD

## SECTION ADJUSTABLE

## Change foot spike
